## REPORT

We students along with our staff from the Department of Public health dentistry representing Lenora institute of dental sciences have recently visited the Primary Health Center (PHC) located in Rajanagaram village East Godavari district, as a part of our curriculum to observe the functions of the PHC. In our visit we mainly observed General Diagnosis of out patients, maternal and child health care, Basic laboratory services, free medicine delivery, staffing pattern and immunization. In the entrance of PHC out-patient services were available from 8am to 2pm. There are 24 hours emergency services for accidents, snake bite, dog bite and pregnancy labor services. Maternal and child health services like antenatal and postnatal care are also available. A basic laboratory for routine services like: urine, stool, blood tests and blood sugar examination along with blood pressure apparatus. Pharmacy is available for delivering free medicine along with antiviral drugs for HIV positive patients. The staffing pattern includes one medical officer, pharmacist, staff nurse, female health worker, health educator, health assistant, upper division clerk, lower division clerk, laboratory technician and four class IV workers. Family planning procedures are also performed along with maternal and child health care. weekly immunization program will be conducted for children below 5yrs of age. This field visit to the PHC has given information about the procedures undertaken in the PHC, the facilities available, equipment used and other special treatments in the PHC.

## REPORT

Department of Public health dentistry of Lenora Dental College has organized a field visit to water purification plant on 17-02-2022 as a part of academic curriculum. 50 students along with faculty of the college visited the plant to study the process of water treatment. The water purification process was explained by authorities of the plant. The water plant supplies 500 Liters of water to college, hostel and canteen every day. The steps involved in the process are water is collected in huge storage tank which is filtered for all major impurities, dirt and grease. This stored water is subjected to reverse osmosis then U.V treatment along with ozonisation is carried out and finally collected in water bins. The TDS (Total Dissolved salts) of 70-100ppm is maintained and monthly water quality analysis is conducted to test any microbial growth in packed water. This field visit gave us knowledge about purification of water on large scale and quality of water. We also realized about importance of purification of water and ill effects of drinking contaminated water.

## REPORT

We students of Lenora institute of dental sciences have visited satellite clinic in Vishranthipuram of Rajamundry on 15-12-2021 accompanied by Faculty - Dr.Anvesh . Satellite clinic working hours are from 9:00AM to 4:00PM. Sunday is a holiday. In the clinic entrance there is a reception area and waiting hall capacitated with 10 chairs. Doctors consultation area for diagnosis followed by clinical area with one dental chair completely equipped. Daily OPD is 10-15. Working staff includes: one dentist, one chair side assistant and one multipurpose worker. Sterilization is carried out with autoclave and water boiler. Comprehensive dental care is given to all patients with regular follow-ups. Critical and complex procedures are referred to dental college. Emergency medicine kit is available in the clinic. For investigations and radiographs patients are referred to nearby lab. Biomedical waste is disposed safely. After visiting the satellite clinic we came to know how a dental clinic is maintained, doctor-patient relationship and management of dental office.

## SURVEY REPORT

**TITLE OF THE SURVEY:** Dental Caries- A disease burden among general population of Rajanagaram village, East-Godavari district.

**Objectives of the study:** To assess the prevalence of dental caries and accumulated treatment needs among general population of Rajanagaram village, East Godavari district.

### Summary of the survey:

We students in III BDS as a part of academic curriculum has participated in the survey conducted to assess the prevalence of dental caries among Rajanagaram people. In the present survey a total of 1000 people aged 12- 65 years were examined out of which 235 were females and 265 were males. The data was collected by using WHO Proforma and clinical examination was done by ADA type III examination using mouth mirror and probe. The survey was carried out by 40 students of III BDS who were trained and calibrated.

The prevalence of dental caries in the present survey was found to be 61.75%.where 12-20 year age group were more affected by Dental caries and because of Dental caries more number of missing teeth were found among 30-40 years age group which may be due to poor oral hygiene and lack of awareness about oral diseases among population. It was observed that treatment needs are accumulated in school children followed by adult population.

There is a need to bring awareness regarding oral diseases and proper maintenance of oral health to the needy in order to decrease the dental caries disease burden.

## SURVEY REPORT

**TITLE OF THE SURVEY:** Periodontitis- a disease burden among general population of Rajanagaram village, East-Godavari district.

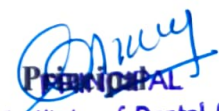

**Objectives of the study:** To assess the prevalence of Periodontitis and treatment needs among general population of Rajanagaram village, East-Godavari district

### Summary of the survey:

We students of III BDS as a part of academic curriculum has participated in the survey conducted to assess the prevalence of Periodontitis among Rajanagaram people. In the present survey a total of 1000 people aged 20- 65 years were examined out of which 492 were females and 508 were males. The data was collected by using WHO Proforma and clinical examination was done by ADA type III examination using mouth mirror and probe. The survey was carried out by 40 students of III BDS who were trained and calibrated. The prevalence of Periodontitis in the present survey was found to be 80.2% . Attrition and Gingival Recessions were found more in people aged above 50 years. Reasons for poor periodontal health may be due to poor oral hygiene, smoking, pan chewing and lack of awareness about oral health.

There is a need to bring awareness regarding oral diseases and proper maintenance of oral health to the needy in order to decrease the Periodontitis disease burden.
